

EQUIPMENT

Switchgear RFQs: compare offers clearly

Align panel scope, ratings and interfaces so quotations can be compared.

WHY THIS MATTERS

A panel count alone does not define the package. Metering, protection, installation and testing requirements shape both the offer and the equipment configuration.

INPUTS TO CONFIRM

- ☐ Provide the single-line diagram, panel schedule and required configuration.
- ☐ Identify voltage, current, fault duty and protection interfaces.
- ☐ Provide project specifications and identify unconfirmed inputs.
- ☐ Record installation space, access, handling and gas-handling requirements.
- ☐ Identify the required drawings, test evidence and factory acceptance scope.
- ☐ State the required delivery date, site interfaces, spares and support boundary.

TWO COMMON OMISSIONS**Metering without interface checks**

Confirm the metering duty, burden and physical fit together. The Rayo joint review illustrates why.

Site work left unallocated

Identify who handles installation, gas handling where applicable, testing and commissioning.

Discuss your equipment requirements

info@lurizonenergy.com

Use with your project specification and the required technical approvals.
